

 BioKeram
REFRACTORIES

A drop of BioKeram applied in shaped or unshaped refractories, will allow you to increase quality while reducing final costs.

BENEFITS

BioKeram offers a unique range of solutions for process and product quality improvement. We have developed solutions depending on your process for plastic shaped bricks, hydraulic pressed bricks or unshaped materials. BioKeram's range of natural products have a neutral CO₂ footprint, are environmentally friendly and non-hazardous.

POSSIBLE BENEFITS DURING PROCESS:

- Improved workability and handling of raw material mixes in the process
- Reduction of pressing friction for dry pressed bricks
- Plastification for extruded bricks
- Lubrication
- Reduction of water requirement
- Substitution for alternative expensive additives
- Energy saving
- Reduced shrinkage during drying
- Reduced losses during manufacture and drying
